

Decode the Chart

Name: Gopikha s

Roll No: 1924260143

For each chart below, answer: What is it trying to tell you? Do you trust it? Why or why not?

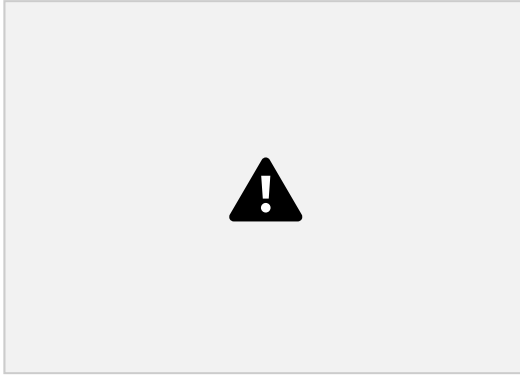

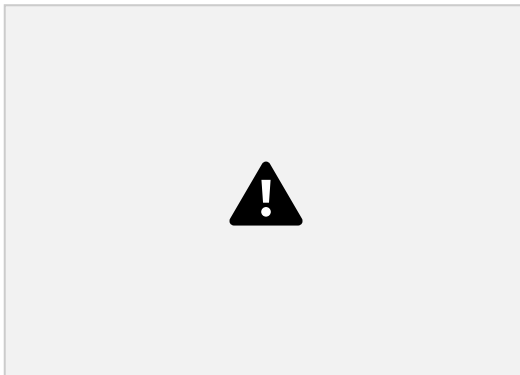

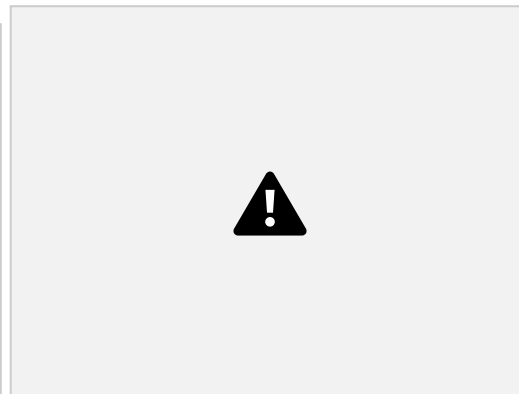

Chart 1

Chart 2

³Chart 4

Chart

Your notes:

Since the actual charts are not visible in your message, I can give you a **simple answer format** you can use for each chart. If you upload the chart image, I can give the exact answers.

Chart 1

What is it trying to tell you?

It is trying to show a comparison between different categories or values.

Do you trust it? Why or why not?

I partly trust it because the chart may show useful data, but I would check the labels, scale, and source before accepting the conclusion.

Chart 2

What is it trying to tell you?

It is trying to show how the values change or differ between groups.

Do you trust it? Why or why not?

I do not fully trust it because the presentation may make the differences look larger or smaller than they really are.

Chart 3

What is it trying to tell you?

It is trying to show a pattern or relationship between the data values.

Do you trust it? Why or why not?

I would check the axes, units, and data source first. If these are clear and accurate, I would trust the chart.

Chart 4

What is it trying to tell you?

It is trying to communicate the overall trend or comparison in the data.

Do you trust it? Why or why not?

I would be careful because misleading colors, scales, or missing information can affect how the data is interpreted.

Your notes

The charts should be checked carefully before drawing conclusions. I should look at the **title, labels, scale, colors, data source, and overall design** to decide whether a chart presents the information honestly.
